1. Installation & Settings

1.1 Note

→ Operating OS: Windows 2000 / XP / Server 2003 / Vista / Server 2008 R2/ 7 / Server 2012 / 8.

Other Software Conditions:

1. MDAC 2.8. (windows 2000 Only)
<http://www.microsoft.com/downloads/details.aspx?familyid=6C050FE3-C795-4B7D-B037-185D0506396C&displaylang=en>
2. For Windows Installer 3.0 and above.
3. For Framework 2.0 and above.

→ Peripherals: Use either a serial port or USB.

1.2 Installation Instructions

1.2.1 Please login as an Administrator.

1.2.2 Double click to execute "Setup".

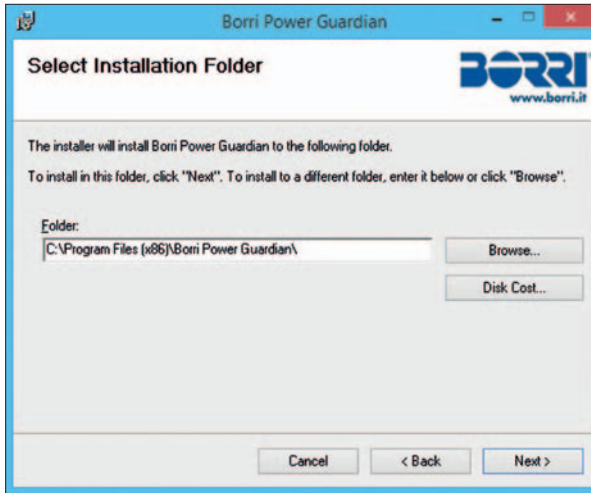

1.2.3 Click "Next" to next step.

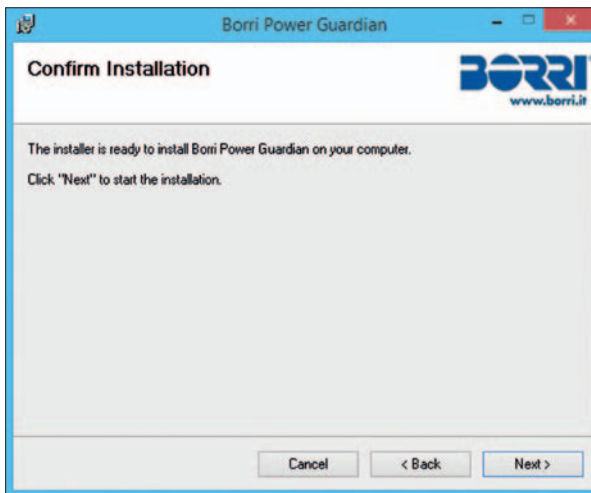

1.2.4 Enter “Select Installation Folder” to select the desire location for this program.

(Default: C:\Program Files\Borri Power Guardian.) Choose the user (yourself or anyone) who uses this software.

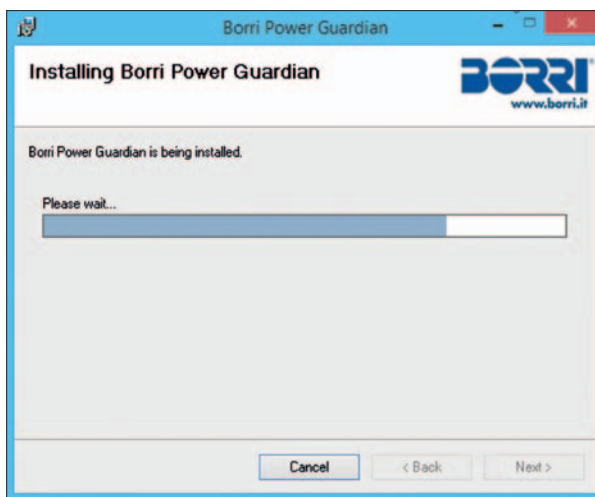

Click “Next” to next step.

**1.2.5 Enter “Confirm Installation” to ensure the completed installation of Borri Power Guardian.**

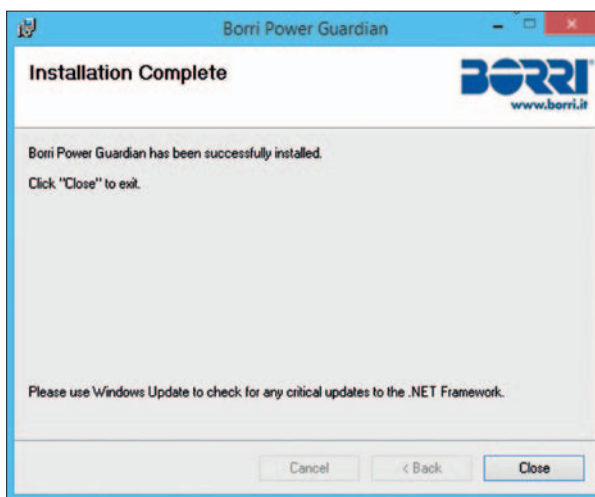

Click “Next” to next step.

1.2.6 Installing Borri Power Guardian program.

1.2.7 Click "Close" to end the installation.

1.3 Instructions on Removing Borri Power Guardian Program

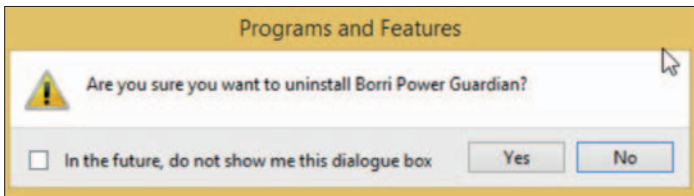

Remove Borri Power Guardian

Step1. Go to Windows Control Panel and select “Programs and Feature”.

Step2. Select “Borri Power Guardian” and click “Remove(or Uninstall)”.

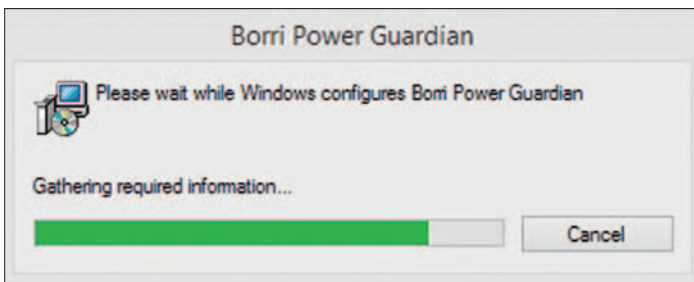

Step3. In the page shown below, click “Yes” to confirm removal of the Borri Power Guardian or click “No” to cancel the removal.

Step4. When the progress bar run to finish, It's complete the removal.

Borri Power Guardian Icon will disappear in the “Add or Remove Programs” page.

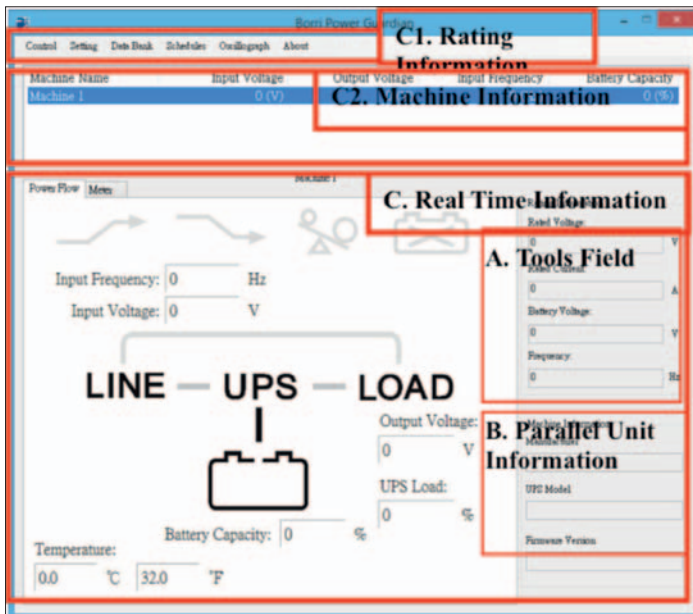

2. Function Descriptions

Borri Power Guardian program is user-friendly UPS monitoring software which reveals the status of the UPS via USB or RS232 for up to 4 parallel units. It provides easy to read real time metering of important UPS parameters such as input/output voltage, frequency, UPS temperature, loads & battery capacity. These UPS parameters & status information are recorded and presented in both graphically and numerically.

The “Schedule” function of Borri Power Guardian allows user to preset various UPS commands to perform repetition of tasks automatically. In event of Power outage or abnormality, Borri Power Guardian program is capable of automatically informing user via SMS & email instantly and closes application software. The following chapters will provides detailed descriptions of these superior features of Borri Power Guardian program.

2.1 Real-Time Information Monitoring Display

A. Tools Field

Function	Descriptions	Remarks
Control	This function include: Self Test, UPS Shutdown. In this function, you can send command to unit in this time.	
Setting	There are 3 parts in this item: "General Setting", "SMS Setting", And "Email Setting". "General Setting": setting of Communications, Multi language, Setting of Shutdown. "SMS Setting": SMS alert function set up. "E-mail Setting": E-mail alert function set up.	
Data Base	There are 2 parts in this item: "Event Log" And "Data Log". "Event Log": Provides a list of records of events, command entries, alarms, etc. "Data Log": Stores the UPS operating parameters monitored & recorded by the Borri Power Guardian.	
Schedules	Provides scheduling of to-do events and commands.	
Oscillograph	Graphical overall of the recorded UPS parameters data.	
About	Record the version number and proprietor name of the Borri Power Guardian.	

B. Parallel Unit Information

Provides input/output voltage, frequency, loads of UPS parameters for up to 4 parallel units at the same time.

C. Real Time Information

When you select unit in Parallel Unit Information zone, the details of UPS parameters will show on this zone.

This zone includes: "Icon page", "Value page", "Rating Information", and "Machine Information".

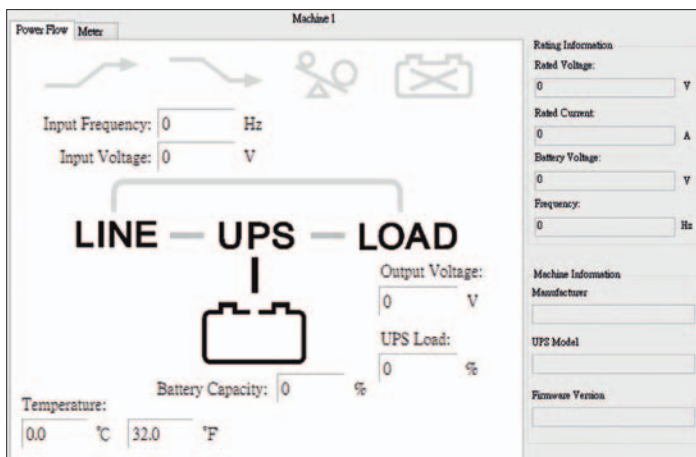

C1. Rating Information

Provides rating information of the connected UPS such as Rating Voltage, Rating current, Battery Voltage, and Frequency.

C2. Machine Information

Provides machine information of the connected UPS such as Manufacturer, UPS Model, and Firmware Version.

		By Pass	

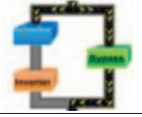

Meter Page:

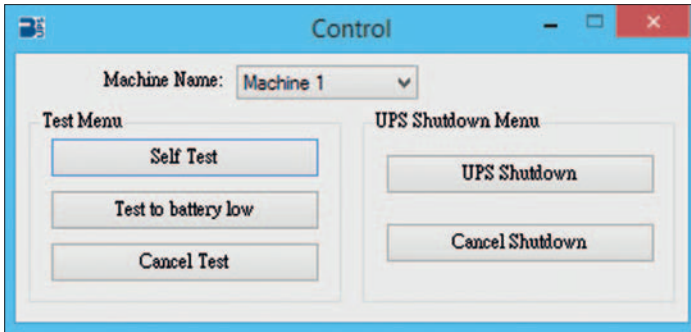

Symbols Description

State	Symbols	Description	Remarks
Connection State		UPS connected. This symbol represent when the UPS is successfully connect to the Computer.	
		UPS disconnected. The connection between the UPS & the Computer is disrupted.	
Power State		Power Supply OK.	
		Power Failure. The utility supply is absent or abnormal conditions.	

Symbols Description

State	Symbols	Description	Remarks
UPS Battery State		Battery Level OK.	
		Battery Low. The UPS battery is near to end of discharge or is at low power level. (2 Icon swap)	
			
		UPS Battery Failed.	
UPS Models		ON LINE Model.	
		OFF LINE Model.	
Test State		UPS No Testing.	
		UPS Testing.	
By Pass.		By Pass mode.	
			

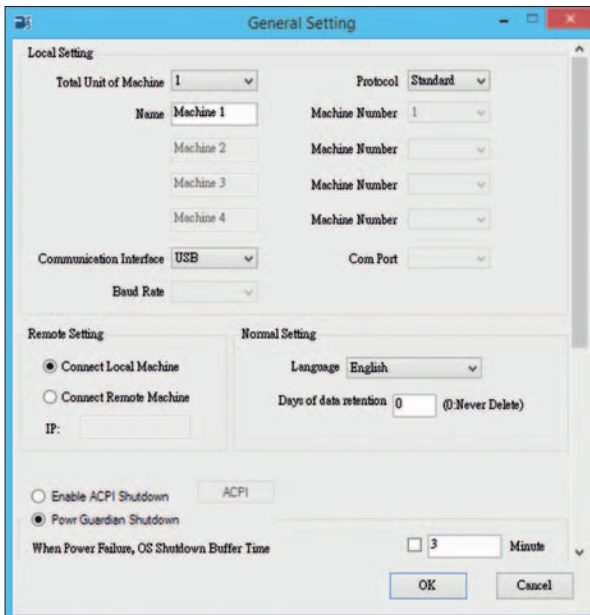

2.2 Control

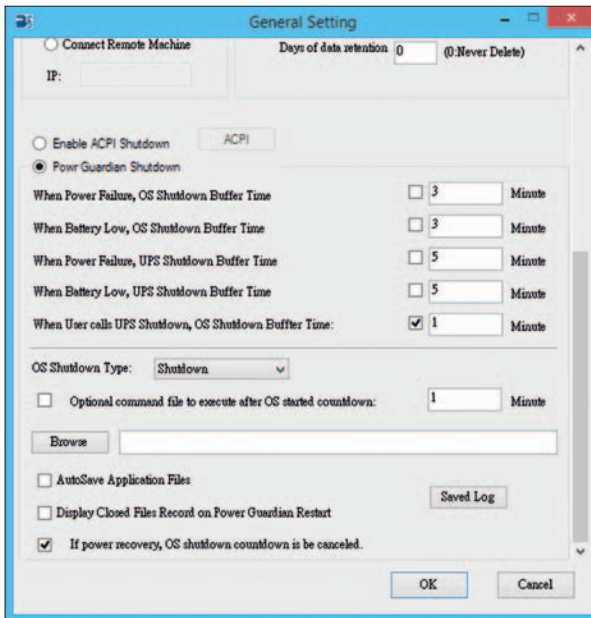

Provides command to UPS for self-test, shut-down, battery discharge test, stop test, etc.

2.3 General Setting

Allows user to select & set the connecting Com port or Remote, UPS or OS shutdown, etc.

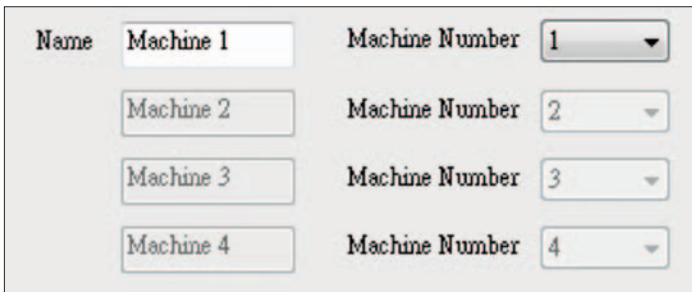

2.3.1. Setting amount of unit, and choose the Protocol.

2.3.2. Setting number of unit, and unit name which show on the Real Time Information Monitoring Display form.

2.3.3. Setting Interface and Com Port of connection.

A screenshot of a settings window showing communication parameters. It includes three dropdown menus: 'Communication Interface' set to 'RS232', 'Com Port' set to 'Com7', and 'Baud Rate' set to '2400'.

2.3.4. Language Selections

A screenshot of a language selection dropdown menu. The label 'Language' is on the left, and the dropdown menu shows 'English' as the selected option.

The Borri Power Guardian program provides various major languages for user selection.

The initial start up language will be English.

2.3.5. Data retention setting

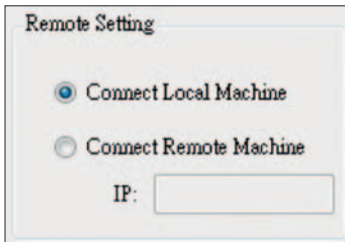

A screenshot of a data retention setting field. The label 'Days of data retention' is on the left, followed by a text input box containing the value '0' and a note '(0:Never Delete)'.

The period of time user intends to save the data in database.

If the value is "0", means data in database never delete.

2.3.6. Remote Setting

A screenshot of a 'Remote Setting' dialog box. It contains two radio buttons: 'Connect Local Machine' (which is selected) and 'Connect Remote Machine'. Below the radio buttons is an 'IP:' label followed by an empty text input box.

If you want to remote other computer, please choose "Connect Remote Machine", and insert IP. If choose "Connect Remote Machine", you can't send command, scheduling and Shutdown the UPS, but can Shutdown the computer.

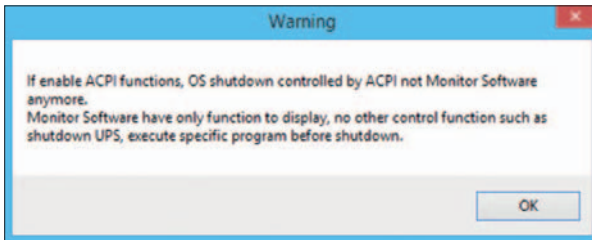

2.3.7. Enable ACPI Shutdown

When Enable ACPI Shutdown, all of the Shutdown functions controlled by ACPI.

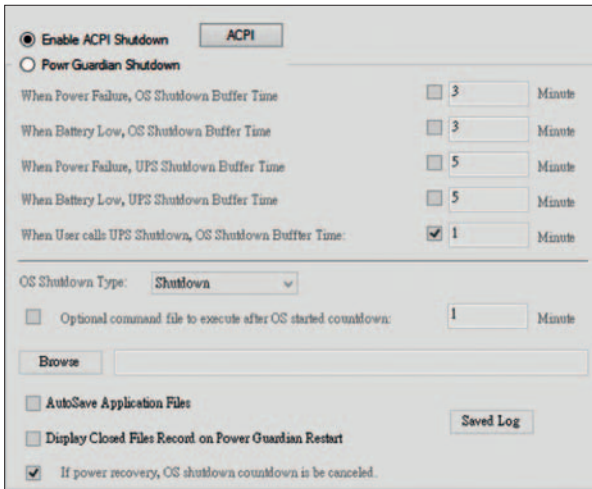

A screenshot of a shutdown settings dialog. It features two radio buttons: 'Enable ACPI Shutdown' (unselected) and 'Power Guardian Shutdown' (selected). To the right of the radio buttons is a button labeled 'ACPI'.

Pop up Warning Message.

Power buffer times arrange.

2.3.8. When Power Failure OS Shutdown Buffer Time

Select a sufficient time for the computer OS to automatically shutdown when a power outage occurred. The selectable time is from 1 min. to 99 min.

2.3.9. When Battery low OS Shutdown Buffer Time

Select a desire time to automatically shutdown the computer OS before the UPS battery power is depleted. The selectable time is from 1 min. to 99 min.

2.3.10. When Power Failure UPS Shutdown Buffer Time

When Power Failure, UPS Shutdown Buffer Time 3 Minute

Select a desire time to automatically shutdown the UPS after a power outage occurred. A longer shutdown buffer time for OS then the UPS one is highly recommended. The selectable time is from 1 min. to 99 min.

2.3.11. When Battery low UPS Shutdown Buffer Time

When Battery Low, UPS Shutdown Buffer Time 2 Minute

Select a desire time to automatically shutdown the UPS before the UPS battery power is depleted. A longer shutdown buffer time for OS then the UPS one is highly recommended. The selectable time is from 1 min. to 99min.

2.3.12. When User calls UPS Shutdown, OS Shutdown Buffer Time

When User calls UPS Shutdown, OS Shutdown Buffer Time: 1 Minute

Select a desire time to automatically shutdown the computer OS before UPS shutdown. The selectable time is from 1 min. to 99 min.

NOTE: Before UPS or OS shutdown , Borri Power Guardian will show countdown window.

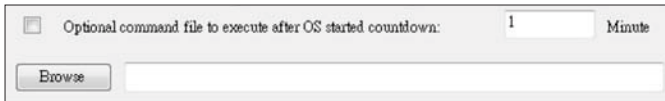

2.3.13. OS Shutdown Type

A screenshot of a control panel element. It consists of a label "OS Shutdown Type:" followed by a dropdown menu. The dropdown menu is currently set to "Shutdown".

If the shutdown type selects "Hibernate" as OS it's.

2.3.14. Optional command file to execute after OS started countdown

Select a desire time to execute specific file automatically after OS started Shutdown.

A screenshot of a control panel element. It features a checkbox labeled "Optional command file to execute after OS started countdown:". To the right of the checkbox is a text input field containing the number "1", followed by the word "Minute". Below this is a "Browse" button and an empty text input field.

2.3.15. Auto save Application

Provides a function to save program when OS shutdown.

A screenshot of a control panel element. It contains two checkboxes: "AutoSave Application Files" and "Display Closed Files Record on Power Guardian Restart". To the right of these checkboxes is a "Saved Log" button.

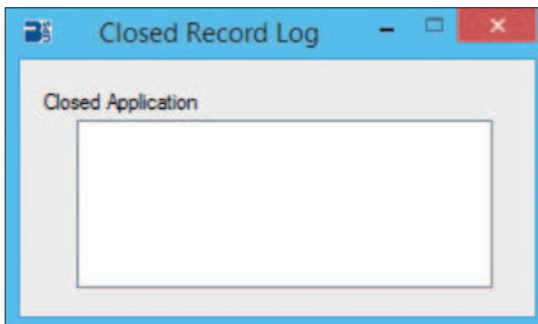

Auto close and save Application Files before OS shutdown.

A screenshot of a single checkbox labeled "AutoSave Application Files".

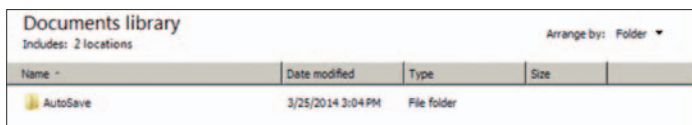

When restart Power Guardian, Pop up the list of Closed Files.

A screenshot of a single checkbox labeled "Display Closed Files Record on Power Guardian Restart".

Record Log

Save AutoSave Directory under My Document.

The screenshot shows a Windows 'Documents library' window. At the top, it says 'Documents library' and 'Includes: 2 locations'. On the right, there is a dropdown menu for 'Arrange by: Folder'. Below this is a table with columns for 'Name', 'Date modified', 'Type', and 'Size'. One entry is visible: 'AutoSave' with a date of '3/25/2014 3:04 PM' and type of 'File folder'.

Name	Date modified	Type	Size
AutoSave	3/25/2014 3:04 PM	File folder	

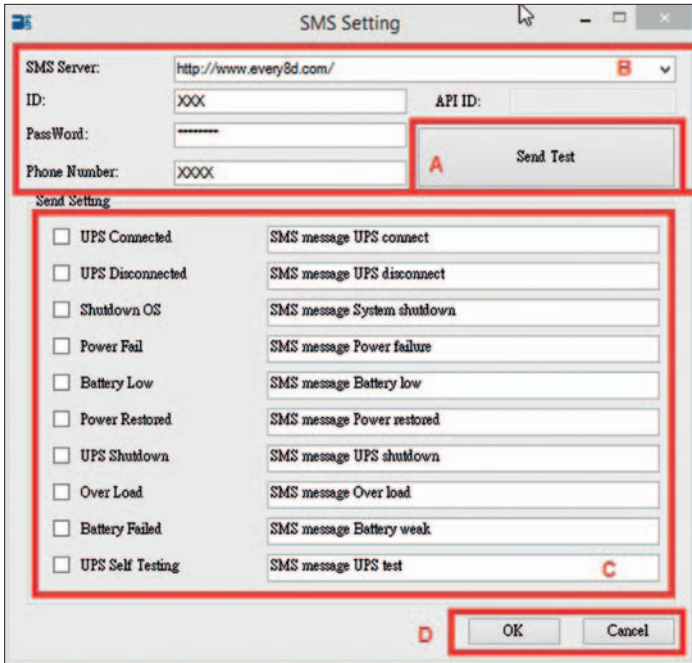

2.3.16. Action When Power Recovery

<input checked="" type="checkbox"/> If power recovery, OS shutdown countdown is be canceled.
--

Cancel OS countdown when power recovery or not.

2.4 SMS

An alert message of recorded event will be sent to a predetermined mobile phone number via a subscribed short message service provider.

This SMS function is only available through third-party Short Message Service Providers. To use this function you need to subscribe an account on [every8d] or [clickatell]. These are currently the only 2 third-party SMS providers supported by Borri Power Guardian program. For more information on subscriptions and charges, please go to their respective website as follow:

1) For [Every8d] :

Go to <http://www.every8d.com/>.

Note: Please subscribe as “Corporate” account in order to use Borri Power Guardian program SMS function.

2) For [Clickatell] :

Go to <http://www.clickatell.com/>

Note: Payment has to be made to obtain an “api_id” before use.

A. Send Test : Click to send a test message to confirm the settings

B. Account Settings:

Insert the SMS provided name, ID, passwords, "api-id" (for Clickatell subscriber only) and mobile phone number (international dialing format, include "+" or "00" and country code).

Note: If you want to send message to more than 1 mobile phone number, must use "," to separate mobile phone numbers.

C. Event & Message Selections:

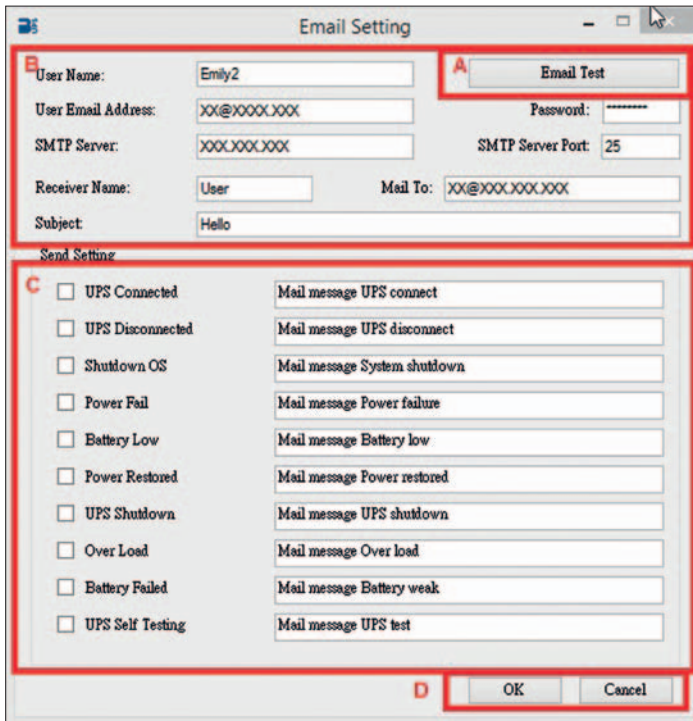

Click to select the desire Events to be broadcasted and the respective message contents (You may change and retype the Message contents to meet your requirement in English).

D. Save Setting:

Click "OK" to save & apply settings

Note: Internet Firewall may not allow this SMS function.
If you have installed Firewall please allow this function.

2.5 E-Mail Settings

A. Sent Test: Click to send a test message to confirm the settings are correct..

B. Account Settings:

Insert the User Name (Sender, e.g. Borri Power Guardian), User Email Address (select a sender email address specifically for this function), Password (the password of your email server), SMTP Server (insert SMTP server or IP address), SMTP Server port (port of SMTP Server), Receiver Name (select a predetermined email address the event messages will be sent to), Mail To (Mail address of receiver), and Subject (select a subject name to acknowledge the receiver).

Note: If you want to send email to more than 1 email address, must use “;” to separate email addresses.

C. Send Setting:

Click to select the desire Events to be broadcasted and the respective message contents (You may change and retype the Message contents to meet your requirement in English).

C. Send Setting:

Click to select the desire Events to be broadcasted and the respective message contents (You may change and retype the Message contents to meet your requirement in English).

D. Save Setting:

Click “OK” to save & apply settings

Note: Internet Firewall may not allow this E-Mailing function. If you have installed Firewall please allow this function.

2.6 Data Log

The ‘Data Bank’ stores all UPS operating parameters monitored & recorded by Borri Power Guardian program. It facilitates the recorded data (include Input Voltage, Output Voltage, Input Frequency, Battery Capacity, Temperature, Load) for a more effective study of the desire information.

The information in the Data Base can be exported to Excel file.

The screenshot shows a window titled "Data Log" with a search bar and a table of data. The table has columns for Time, Input Voltage, Output Voltage, UPS Load, Input Frequency, Battery Capacity, and Temperature. The data shows consistent values over a period of time.

Time	Input Voltage	Output Voltage	UPS Load	Input Frequency	Battery Capacity	Temperature
2015/04/29 07:27:40	115	110	0	60	100	33
2015/04/29 07:27:41	115	110	0	60	100	33
2015/04/29 07:27:43	115	110	0	60	100	33
2015/04/29 07:27:44	115	110	0	60	100	33
2015/04/29 07:27:46	115	110	0	60	100	33
2015/04/29 07:27:47	115	110	0	60	100	33
2015/04/29 07:27:49	115	110	0	60	100	33
2015/04/29 07:27:50	115	110	0	60	100	33
2015/04/29 07:27:52	115	110	0	60	100	33
2015/04/29 07:27:53	115	110	0	60	100	33
2015/04/29 07:27:55	114	110	0	60	100	33
2015/04/29 07:27:56	115	110	0	60	100	33
2015/04/29 07:27:57	115	110	0	60	100	33
2015/04/29 07:27:59	115	110	0	60	100	33
2015/04/29 07:28:01	115	110	0	60	100	33

2.6.1. Setting Machine Name and date of data

Machine Name: Date:

Choose the “Machine Name” and “Date”, click “Search” have the further information.

2.6.2. Tools

Work Progress:							
<input type="button" value="Export"/> <input type="button" value="First"/> <input type="button" value="Last"/>							
	Time	Input Voltage	Output Voltage	UPS Load	Input Frequency	Battery Capacity	Temperature
▶	2015/04/23 10:06:33	114	110	0	60	100	34
	2015/04/23 10:06:36	114	110	0	60	100	34
	2015/04/23 10:06:39	114	110	0	59.9	100	34
	2015/04/23 10:06:42	114	110	0	59.9	100	34

	2015/04/23 10:06:58	114	110	0	59.9	100	34
	2015/04/23 10:07:00	114	110	0	59.9	100	34
	2015/04/23 10:07:03	114	110	0	60	100	34
	2015/04/23 10:07:06	114	110	0	59.9	100	34
	2015/04/23 10:07:09	114	110	0	60	100	34
	2015/04/23 10:07:12	114	110	0	60	100	34
	2015/04/23 10:07:15	114	110	0	60	100	34

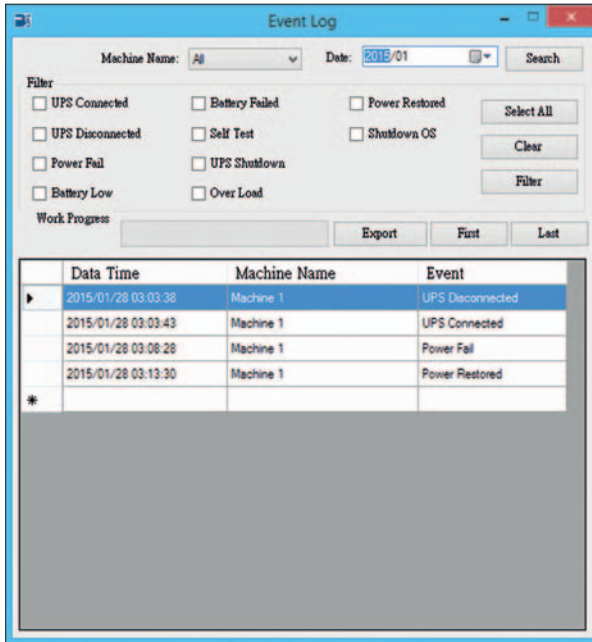

Export: Click to export the current data into “xls” format.

First: Click to go to the first recorded entry.

Last: Click to go to the last recorded entry.

2.7 Event log

The “Event Log” provides a list of records of all the events & tasks to be performed by the program and those that had occurred on each day of the particular month. It provides a summary of the Utilities conditions and UPS testing results.

2.7.1. Setting Machine Name and date of data

Choose the “Machine Name” and “Date”, click “Search” to have the further information.

2.7.2. Filter

The filter dialog box contains the following elements:

- Checkboxes:
 - UPS Connected
 - UPS Disconnected
 - Power Fail
 - Battery Low
 - Battery Failed
 - Self Test
 - UPS Shutdown
 - Over Load
 - Power Restored
 - Shutdown OS
- Buttons:
 - Select All
 - Clear
 - Filter

Please select or unselect the desire parameters by clicking on the respective parameter field box. Click “Filter” to have further information.

Select All: Field box of all events will be “”

Clear: Field box of all events will be “”

Filter: Click “Filter” the data will show respectively.

2.7.3. Tools

The screenshot shows a table with the following data:

	Data Time	Machine Name	Event
<input checked="" type="checkbox"/>	2009/11/05 11:02:50	Machine 1	UPS Disconnect
<input type="checkbox"/>	2009/11/05 11:12:51	Machine 1	UPS Disconnect
<input type="checkbox"/>	2009/11/05 11:13:39	Machine 1	UPS Disconnect
<input type="checkbox"/>	2009/11/05 16:19:26	Machine 1	UPS Disconnect
<input type="checkbox"/>	2009/11/05 16:40:48	Machine 1	UPS Disconnect

Buttons: Export, First, Last

Export: Click to export the current data into “xls” format.

First: Click to go to the first recorded entry.

Last: Click to go to the last recorded entry.

2.8 Schedule

“Schedule” allows user to create a desire routine to notify UPS to perform specific or repeatable tasks automatically at predetermined dates & times.

Please refer to the following instructions to create an entry:

Number	Machine	Repeat	Control Item	Date	Week	Time
➔➔						

2.8.1. Setting Machine and time which you want to schedule.

Machine Name:	Machine 1	Date:	2015/04/23 Thursday
Time:	10:07	Repeat:	Today

Machine Name: Choose the machine.

Date: Choose the Date.

Time: Time Setting.

Repeat: Set frequency.

A: Self test for 10 seconds.

B: Self test until battery low.

C: Insert minutes to shutdown the UPS.

D: Insert minutes to shutdown the UPS.

The UPS will turn on automatically at the predetermined time.

2.8.3. Create, Delete, and Edit the data of Schedule

	Number	Machine	Repeat	Control Item	Date	Week	Time
▶	14	Machine 1	Weekly	Test for 10 seconds.	23/04/2015	Thursday	10:07
	15	Machine 1	Weekly	Test for 10 seconds.	26/04/2015	Sunday	10:32
*							

Create: Click “Add” to create a new task.

Edit: Step1. Choose the task from the schedule list, the highlighted blue bar is the chosen task.

Step2. Set Machine and schedule items.

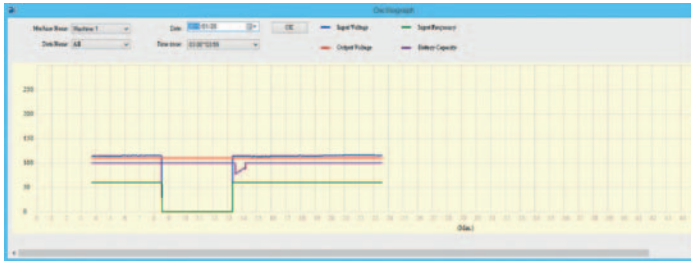

Step3. Click “Edit” to modify your selection.

Delete: Choose the task from the schedule list, the highlighted blue bar is the chosen task.

Click “Delete” to delete the task you choose.

2.9 Oscillograph

The “Oscillograph” provides a summarized report of the recorded UPS operating data. The recorded data are represented in line curves to provide an easy to read summary of the Utility & UPS power quality.

2.9.1. Tools

The 'Tools' dialog box contains the following fields and controls:

- Machine Name:** A dropdown menu currently set to 'Machine 1'.
- Date:** A date picker set to '2015/01/28' with an 'OK' button next to it.
- Data Name:** A dropdown menu currently set to 'All'.
- Time zone:** A dropdown menu set to '03:00~03:59'.

Machine Name: Choose the machine which you want to show.

Date: Set the date of data you want to show.

Data Name: 5 items can be chosen: “ALL”, “Input Voltage”, “Output Voltage”, “Input Frequency”, “Battery Capacity”.

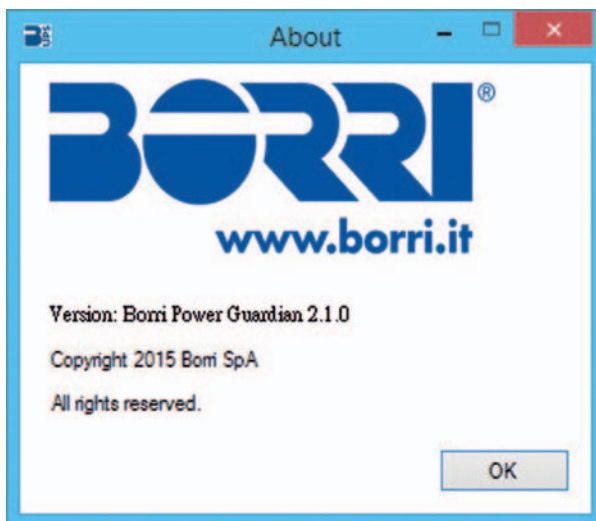

Time zone: Choose the time interval.

2.10 Pop up alarms for Power Abnormal

When UPS happens one of Power Fail, Battery Low, Battery Failed, and Overload, it will show alarm window in order to remind user to prompt handle.

2.11 About

Click to confirm version of the Borri Power Guardian software.

Click "Help" to show this user manual.
